<u>MONTHLY ASSESSMENT -III</u> (Detail Design, Prototype and Test phase)
(This assessment shall be done by another guide of department or interdepartmentally along with guide) **(DATE :___/___/___)**

1. Which theoretical subjects/concepts are involved with your project? How it is useful to your project?
   Subjects : Database Management System, Human- Computer Interaction (HCI), Internet of things.

   Concepts: Voice Recognition, Smart Home Integration usefulness: HCI principles guide the user

   interface design for optimal interaction, while DBMS arrange proper data while IOT concepts ensures the app to diverse user needs.

2. Which software/design tool/Skills you have learned/applied during the project? Explain the features of it.

   DBMS For programming, unity for prototyping GPS System for tracking, Android Studio for App Development

   Features: DBMS arrange and search user information

   unity: prototyping and testing of user interface element

   Android Studio: App development and integration with smartphone.

3. Explain the prototype/model prepared by the student/team.

   The prototype includes a user-friendly interface with GPS system It provides a bus location and generate online bus passes. It provides a hands in experience of the app's key features and interactions.

4. What are the materials, technology, things have utilized to make the prototype/model?

   __Materials: Virtual elements for the interface.

   __Technology: GPS for bus location tracking.

_____

5. How many Iterations have you done to reach final solution? Explain modification/revise parameters/characteristics for each iteration.

   In designing an online bus tracking system for GRSTC, reaching the final solution might involve iteration or interaction could involve modifying or revising parameters or characteristics to improve the system. For instance, in the first iteration, you might start with basic functionalities like GPS integration for real time tracking. After interaction or feedback, you could modify parameters by enhancing the user interface for ease of use.

6. What is the scope of the project? How you are planning to implement it in future?

   Scope: The project aims to learn about GRSTC and track bus location and guidance about online pass by assistance app

   Future Implementation: Continuous refinement based on user feedback and technology

   Collaboration with people and GRSTC management

SUGESTIONS BY EVALUATOR:

PROTOTYPE/MODEL SUGGESTIONS:
GENERAL SUGESTIONS:
Overall Mark, considering assessment I & II (Out of 10):

Department/Interdepartmental Evaluator name and sign:
